KINGSTAR Soft Motion 3.1.2 release notes

New features

The following new features and improvements are available in this release:

NOTE: Reference numbers, [KS-<XXX>], are for internal tracking purposes.

- Add new supported hardware:
 - Intel network interface cards
 - Realtek network interface cards

Fixes

- When the EndVelocity of **MC_MoveContinuousAbsolute** and **MC_MoveContinuousRelative** is set to zero, the motor continuous to run at minimum speed even if it has reached the EndVelocity. [KS-319]
- If the EndVelocity of **MC_MoveContinuousAbsolute** and **MC_MoveContinuousRelative** is larger than the maximum velocity configured using the **ConfigureServoMotion** function, the motor will stop and a Position Lag error occurs after it travels the specified distance. [KS-320]
- Cam fails when slave positions are relative, profile is periodic (continue), and SlaveOffset > 0. [KS-325]
- When sending the **EC_ReadWordParameter** command with the parameters "TRUE, 0, &QueueIndex, 0x6060, 0, &Done, &Busy, &Error, &ErrorID, &Value," the output "Busy" should be TRUE immediately, but it displays FALSE. [KS-340]

- Sanyo Denki RF2 servo drives encounter problems when Mode of Operation and Mode of Operation Display objects is enabled using the **EnableSynchronizedControlMode** function. [KS-341]
- KINGSTAR share memory is not initialized to zero. [KS-346]
- The mcMinPositionLag parameter doesn't work properly. [KS-349]
- The output of the **MC_GroupEnable** and **MC_GroupDisable** function blocks don't update. [KS-356]
- The axis group index must have zero and one, or the commands won't run and it displays the message of access violation. [KS-357]
- The .NET **EC_ReadWordParameter** function doesn't use the Done output to notify users when it's done. [KS-375]
- **MC_Inch** and **MC_Jog** functions of Win32 interface fail to work. [KS-391]

Known issues

- After installing and configuring RTX64 3.2, you are prompted to restart Windows. There is an error icon in the prompt dialog box, but the message is a reminder, not an error.
- ISaGRAF PLC Workbench needs internet connection to install Microsoft .NET Framework 4.5.1.
- The KINGSTAR .NET Sample can't run in the KINGSTAR **bin** folder or from the shortcut of Windows **Start** menu (because the shortcut points to the **bin** folder). To run it, you need to copy the executable file (.exe) of .NET Sample to other place (ex: Desktop), or recompile the sample and set another folder as the output directory. [KS-63]
- The output of the **MC_GroupEnable** and **MC_GroupDisable** function blocks influence the power state of the single axis in the group. [KS-366]
- If you click **Start/Stop KINGSTAR PLC** in KINGSTAR Soft PLC Runtime when ISaGRAF PLC Workbench is debugging in **Online** mode, the computer may crash. The workaround is stopping debugging first, and then click **Start/Stop KINGSTAR PLC**. [KS-369]

- When you recompile samples, the default output directory is the KINGSTAR **bin** folder (C:\Program Files\IntervalZero\KINGSTAR\bin). You need to change the output directory to other folder, otherwise a build/compile error may occur. [KS-399]

Get support

KINGSTAR offers a number of support options for KINGSTAR users, including third-party, online and phone support.

Third-party support

If you are a customer who purchased a KINGSTAR product through a third-party reseller, contact the reseller for support.

Online support

The KINGSTAR Customer Support web page is located at:

<http://kingstar.com/support/>

The KINGSTAR support web pages provide electronic access to the latest product releases, documentation, and release notes. You can access the online support ticketing system to submit issues or questions.

Before calling technical support

Please have the following information ready before calling KINGSTAR Technical Support:

The version number of your RTX64 and KINGSTAR software

To obtain the RTX64 version number:

1. Click **Start > All Programs > RTX64 3.2 Runtime > Control Panel**.
2. In the **RTX64 3.2 Control Panel**, record **Version** shown in the **Runtime Information** area.

To obtain the KINGSTAR version number:

1. Click **Start > All Programs > KINGSTAR > Runtime**.
2. In **Windows Explorer**, click the `ksm64.rtdll` file, and right-click the same file again.
3. On the shortcut menu, click **Properties**.

4. In the **ksm64.rtdll Properties** window, click the **Details** tab, and record **Product version**.

Phone support

For technical support related to installing and using KINGSTAR, please call technical support at this number:

+886-2-2556-8117

Hours are Monday-Friday from 9:30 to 18:30, UTC+08:00, excluding holidays.
