# KINGSTAR Soft Motion 3.3 release notes

## New features

The following new features and improvements are available in this release:

**NOTE:** Reference numbers, [KS-<XXX>], are for internal tracking purposes.

- Add new supported hardware:
  - Servo drives
    - Fastech Ezi-SERVO II EtherCAT [KS-557]
  - EtherCAT I/O modules
    - Advantech AMAX-4800 Series [KS-610]
    - CKD OPP6 Series [KS-519]
    - Hitachi EH IOCA [KS-521]
    - Interface PCI-450601 [KS-522]
    - Kashiyama ECAT01 [KS-523]
    - Nagano Oki NOKECW R-IN32M3-EC [KS-524]
    - Ricoh AP-10A [KS-525]
    - Tem-Tech Lab. ECG-485 [KS-526]
- Add Ethernet over EtherCAT (EoE) in Concept and its function **SetSlaveEoeIp**. [KS-110]
- Add the autotuning algorithm to Tuning Console to find KP/KD values. [KS-116]
- Add File Access over EtherCAT (FoE) functions in PLCopen: **EC\_ReadFile**, **EC\_WriteFile**. [KS-473]
- Add the **GetDCSystemTime** function. [KS-533]

- Add heartbeat functions: **ConfigHeartbeat**, **PulseHeartbeat**. [KS-597]
- Add the matrix of supported operating systems and Visual Studio versions. [KS-613]
- Add heartbeat function blocks: **RTX\_ConfigureHeartbeat**, **RTX\_PulseHeartbeat**. [KS-620]
- Add homing description in Concepts.

## Updates

- Update the user interface and features of KINGSTAR Tuning Console. [KS-587]
- The .NET API Sample is replaced with the .NET Class Sample. [KS-607]
- Support RTX64 3.3. [KS-632]
- The RT and Win32's function list "SDO" is renamed as "Mailbox."

## Fixes

- The **MC\_MoveLinearAbsoluteEx**, **MC\_MoveLinearRelativeEx**, **MC\_MoveLinearAdditive**, **MC\_MoveCircularAbsolute**, **MC\_MoveCircularAdditive**, **MC\_MoveCircularRelative** and **MC\_GroupReadActualAcceleration** functions don't work in the Win32 interface. [KS-548]
- **MC\_WriteDigitalOutput** doesn't work properly and always returns an Error ID: 6 **mcWrongQueueIndex**. [KS-554]
- When using **GetServoMotionStatus** to read motion status, it may return **motionStopped**, even though a motion command has been sent successfully. [KS-555]
- When **JogForward** and **JogBackward** are enabled at the same time using **MC\_Jog** during **Standstill**, the error ID is 21, which is not in the **MC\_Error** list. [KS-556]
- If there are only input modules on the EtherCAT bus and one of input modules connects to Omron DI Module GX-ID1611, KINGSTAR cannot access the input data. [KS-559]

- **MC\_GroupReadActualVelocity**'s **Valid** output do not change after it is called. [KS-578]
- **MoveServo** does not move all the selected axes. [KS-583]
- **WriteServoDO**'s return code is wrong if the drive is simulated. [KS-584]
- When PLC writes data into the KINGSTAR share memory, the initialization doesn't work properly. Initially the data in the share memory doesn't match the data in the PLC. [KS-585]
- If you use **MC\_GroupReadActualVelocity** to read **PathVelocity** during a **MoveCircular** movement, the **PathVelocity** value will be incorrect. [KS-598]
- **MC\_GroupDisable** and **MC\_UngroupAllAxes** do not stop current group motion. [KS-600]
- **MoveServo** functions don't work in the Win32 interface. [KS-601]
- When using servo module functions to configure homing motion profile, the return code is -1 (returnFailed), but the functions still take the parameters. [KS-608]
- The axis does not decelerate and go back to the latched position during the forward motion of **homingLatch**. [KS-615]
- **MC\_GroupHalt** does not use the input **JerK** value. [KS-642]
- **MC\_Jog**'s parameter, **InVelocity**, is not reset after being aborted. [KS-645]
- In the Win32 interface, KINGSTAR uses **MC\_MoveLinearRelative** when you call **MC\_MoveLinearAdditive**. [KS-647]
- If running **MC\_GroupStop** when **MC\_MoveLinearAbsolute** is running, all axis groups stop abnormally and an error occurred. [KS-651]
- **MC\_GroupStop**'s output is wrong after its command is aborted by **MC\_GroupDisable**. [KS-652]
- **MC\_GearIn**'s **InGear** and **MC\_GearInPos**'s **InSync** will keep set after **CommandAborted** is set. [KS-660]

- **HomingStatus** is unable to get **homingSuccess** when it works on the **homingSlave** mode. [KS-663]
- In the Win32 interface, **GetFeature** returns the wrong values for some features. [KS-667]
- **MC\_GroupHalt** in Win32 doesn't work properly, because it links to single axis' **MC\_Halt** in the motion library. [KS-669]
- NetApilInterface sample cannot start again after the **Stop** button is clicked. [KS-702]

## Known issues

- ISaGRAF PLC Workbench needs internet connection to install Microsoft .NET Framework 4.5.1.
- If you click **Start/Stop KINGSTAR PLC** in KINGSTAR Soft PLC Runtime when ISaGRAF PLC Workbench is debugging in **Online** mode, the computer may crash. The workaround is stopping debugging first, and then click **Start/Stop KINGSTAR PLC**. [KS-390]
- In the .NET API and .NET Class interface, a few methods link to the wrong methods in the motion library: [KS-672] [KS-673]
  - .NET API: **SetEoeIp**, **GearIn**, **GearInPos** and **MoveVelocity**
  - .NET Class:
    - **SetEoeIpAsync** method
    - **MotionGear**, **MotionGearInPos**, **MotionMoveVelocity** class > **RunCommandAsync** method
- In the .NET Class interface, **PulseHeartbeatAsync** links to the wrong method in the motion library. [KS-677]

# Get support

KINGSTAR offers a number of support options for KINGSTAR users, including third-party, online and phone support.

## Third-party support

If you are a customer who purchased a KINGSTAR product through a third-party reseller, contact the reseller for support.

## Online support

The KINGSTAR Customer Support web page is located at:

<http://kingstar.com/support/>

The KINGSTAR support web pages provide electronic access to the latest product releases, documentation, and release notes. You can access the online support ticketing system to submit issues or questions.

## Before calling technical support

Please have the following information ready before calling KINGSTAR Technical Support:

### The version number of your RTX64 and KINGSTAR software

To obtain the RTX64 version number:

1. Click **Start > All Programs > RTX64 3.4 Runtime > Control Panel**.
2. In the **RTX64 3.4 Control Panel**, record **Version** shown in the **Runtime Information** area.

To obtain the KINGSTAR version number:

1. Click **Start > All Programs > KINGSTAR > Runtime**.
2. In **Windows Explorer**, click the `ksm64.rtdll` file, and right-click the same file again.
3. On the shortcut menu, click **Properties**.

4. In the **ksm64.rtdll Properties** window, click the **Details** tab, and record **Product version**.

## Phone support

For technical support related to installing and using KINGSTAR, please call technical support at this number:

+886-2-2556-8117

Hours are Monday-Friday from 9:30 to 18:30, UTC+08:00, excluding holidays.
